

LINKINCREEK SHOWER GLASS

INVISIBLE SHEILD Eazyclean Glass Coating Maintain Instruction

REGULAR RINSE, WIPE, and DRY – *this suits most people, if you don't like drying your glass please ask, as we have solutions for that too.*

If you want to rinse your glass, put your shower head against the glass and rinse the surface, or use a cup or container to fill & pour water down the glass. This will help wash away any “minerals” or “soap scum” that is on the surface.

Important Step – Using a towel or similar, dry the glass. This will wipe off anything that is sitting on the surface and helps you feel if there are any “sticky” or “gritty” patches that may need attention.

You can use a squeegee, but we recommend to finish drying with a cloth or towel. Usually the edges and around handles, and hinges.

The more often you do this the easier your ongoing maintenance will be.

WEEKLY SURFACE CLEAN – If you dry your glass daily, you may find you can stretch this step to monthly or even longer.

After you rinse or after a shower, clean the glass **firmly** with a “scrunchie”, or approved cleaning pad, and clean water – **You are cleaning it, be firm!** and don’t worry, you won’t be rubbing off the **Invisible Shield Eazyclean**, it is a very durable surface. You may see and feel the surface change, it should be smooth, and look clean and clear. Now rinse the glass again, & give it a dry off.

If there is still a little smearing or the water isn’t clearing off well, put a **REALLY SMALL** amount of dishwashing liquid*, **just a drop or less, just a smear** – use the least amount you can – on your scrunchie, then use that to again **FIRMLY** clean your glass, rinse it again – most of the water should clear off it, and give it a final dry over. If still not smooth or water is still not clearing see the section on **Invisible Shield** Restorer and **Glass Scrub** restorer.

** We don’t recommend “Eco” type dishwashing liquid – Palmolive, Morning Fresh or Sunlight work well.*

REPEL GLASS & SURFACE CLEANER If you see some clouding or harder to move marks, especially around handles & hinges or down the bottom of the glass, Glass scrub has been developed to quickly and easily remove this without damaging the surface. The earlier this is done the easier and more successful this will be. Once the contamination is removed, finish off with REPEL glass and surface cleaner to return the water repellency along with the smooth & easy to clean surface.

RESTORATION CREAM | Over time the top layer of **Invisible Shield Eazyclean** can wear, the better, or more frequently, the glass is dried after use, the longer this will be. If you notice a reduction of the water “beading”, or the surface is starting to not feel or look as water repellent, a simple application of REPEL GLASS & SURFACE CLEANER will help to return the water repellency, providing the surface is clean – we do suggest it is first cleaned with GLASS SCRUB CREAM.

REPEL GLASS & SURFACE CLEANER can also be used as a booster, to reduce the drying frequency, or to make the clean even easier.

Hard Water or Bore Water Areas | Rinse and dry after EVERY shower.

More regular cleaning with the approved cleaning pad may be required, and Restoration CREAM as needed.

Regular application of REPEL GLASS & SURFACE CLEANER is recommended.
